Dear Hiring team

I am excited to apply for the Full Stack Engineer- Product position at One, as it aligns perfectly with my career aspirations and skillset. Having thrived as a Senior Fullstack Engineer at Keep, I have honed my expertise in building scalable systems and driving data-centric decision-making, which I believe will significantly contribute to One's mission to revolutionize financial services.

Throughout my career, I have developed a proficiency in fullstack software, with a strong command over AWS, React, NestJS, and credit score monitoring technologies. At Keep, I owned the data aggregation process for marketing tools, enhancing data attribution accuracy by 90%. This experience positioned me to effectively handle complex data challenges and streamline workflow processes, skills that I am excited to bring to One.

My background also includes developing a system for batch credit pulls, which significantly improved credit limit assignment while minimizing risk. In addition, I led a successful 2FA adoption campaign, enhancing security with minimal user friction. These initiatives underscore my ability to integrate innovative solutions that align with both business objectives and user experience, resonating with One's commitment to seamless product development.

I am particularly drawn to One's innovative approach to the FinTech landscape and the potential to contribute to its growth-focused initiatives. My experience in conducting over 30 technical interviews and driving improvements in underwriting and compliance processes will provide valuable insights as One continues to expand its market presence.

I am eager to further discuss how my background, skills, and passion for technology can be leveraged at One. Thank you for considering my application. I look forward to the possibility of contributing to your team and am available at your earliest convenience.

Sincerely,Cesar Pérez
